aimed at senior undergraduates and first year graduate students this book offers a principles based approach to inorganic chemistry that unlike other texts uses chemical applications of group theory and molecular orbital theory throughout as an underlying framework this highly physical approach allows students to derive the greatest benefit of topics such as molecular orbital acid base theory band theory of solids and inorganic photochemistry to name a few takes a principles based group and molecular orbital theory approach to inorganic chemistry the first inorganic chemistry textbook to provide a thorough treatment of group theory a topic usually relegated to only one or two chapters of texts giving it only a cursory overview covers atomic and molecular term symbols symmetry coordinates in vibrational spectroscopy using the projection operator method polyatomic molecular orbital theory band theory and Tanabe-Sugano diagrams includes a heavy dose of group theory in the primary inorganic textbook most of the pedagogical benefits of integration and reinforcement of this material in the treatment of other topics such as frontier molecular orbital acid base theory band theory of solids inorganic photochemistry the Jahn-Teller effect and Wade's rules are fully realized very physical in nature compare to other textbooks in the field taking the time to go through mathematical derivations and to compare and contrast different theories of bonding in order to allow for a more rigorous treatment of their application to molecular structure

bonding and spectroscopy informal and engaging writing style worked examples throughout the text unanswered problems in every chapter contains a generous use of informative colorful illustrations

this reference describes standard and nonstandard coordination modes of ligands in complexes the intricacies of polyhedron programmed and regioselective synthesis and the controlled creation of coordination compounds such as molecular and h n p complexes chelates and homo and hetero nuclear compounds it offers a clear and concise review of modern synthetic techniques of metal complexes as well as lesser known gas and solid phase synthesis electrosynthesis and microwave and ultrasonic treatment of the reaction system the authors pay special attention to o hydroxyazomethines and their s se containing analogues b diketones and quinines among others and examine the immediate interaction of ligands and metal salts or carbonyls

the series structure and bonding publishes critical reviews on topics of research concerned with chemical structure and bonding the scope of the series spans the entire periodic table and addresses structure and bonding issues associated with all of the elements it also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures physical and spectroscopic techniques used to determine examine and model structures fall within the purview of structure and bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant the individual volumes in the series are thematic the goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of

interest to a larger scientific audience thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole the most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed a description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere the coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented discussion of possible future research directions in the area is welcomed review articles for the individual volumes are invited by the volume editors
